

WEEKLY INTERNSHIP JOURNAL

February 23-27, 2026

Description of the Activity: During my first week, we were oriented on what the Department of Public Works and Highways (DPWH) does, as well as the functions of our assigned department, its responsibilities, and the role it plays within DPWH Region III. We were also introduced to the network room, where the servers are located. Sir Ryan explained the function of each component and emphasized how sensitive the equipment is. Additionally, we were tasked with organizing the wiring inside the network room to make it cleaner and more orderly.

Problems Encountered: The Ethernet cables connected to each switch are directly linked to different departments, providing services such as IP phones, internet, and intranet access. During the task, we accidentally plugged a cable into the wrong port, which resulted in a mismatch of IP connections. Shortly after, our superiors informed us that a department had reported a sudden loss of internet connectivity.

Actions Taken: Upon being notified of the issue, we immediately retraced our steps and checked the cable connections on the switch. We identified the misplaced Ethernet cable and reconnected it to the correct port. After restoring the proper connection, we verified that the affected department's network services were functioning normally and informed our supervisor of the resolution.

Learning Experience: This experience highlighted the importance of careful cable management and proper labeling when handling network infrastructure. It also taught us to double-check connections before finalizing any changes, as even a small mistake can disrupt multiple users. Additionally, we learned the value of quick response and systematic troubleshooting in resolving network-related issues efficiently.

WEEKLY INTERNSHIP JOURNAL

March 2-6, 2026

Description of the Activity: We were taught how to perform preventive maintenance on computers, as we will be conducting the monthly preventive maintenance for each department. This process involves checking whether each personal computer is functioning properly, ensuring that it is clean, verifying that there are no unauthorized applications installed, confirming that there is sufficient storage available, checking if the unit is connected to the domain network, and documenting the system specifications.

Problems Encountered: I noticed that I was slower compared to the other interns who had already been working there for a longer period. I also encountered issues that were not discussed during the initial orientation, particularly situations that required prior hands-on experience.

Actions Taken: To address this, I made it a point to ask questions whenever I needed clarification. I also stayed proactive by being observant, engaging in tasks whenever possible, and maintaining a curious mindset. Over time, I improved my speed by applying both what I learned during the training and my prior knowledge.

Learning Experience: This experience taught me the importance of adaptability and continuous learning in a real-world work environment. I realized that not all situations can be covered during training, and hands-on experience plays a significant role in developing efficiency and confidence. It also reinforced the value of asking questions, staying proactive, and learning from more experienced colleagues to improve performance over time.

WEEKLY INTERNSHIP JOURNAL

March 9-13, 2026

Description of the Activity: We continued the preventive maintenance on other departments, and fixed some cables that the printers we were using, it wasn't getting pinged in the pc so we had to check the cable connection

Problems Encountered: Due to limited hands-on experience in networking, I initially struggled to determine whether the issue was caused by faulty cabling, incorrect network configuration, or device-related problems. There were instances where the cables appeared properly connected, but the printer still could not be detected, which made troubleshooting more challenging.

Actions Taken: To resolve the issue, we systematically checked the physical connections, including Ethernet cables and ports, to ensure they were securely plugged in and functioning. We also verified the printer's network status by checking its IP address and attempting to ping it from the computer. When necessary, we reconnected cables, tested alternative ports, and consulted with more experienced personnel to confirm the correct troubleshooting steps. Through this process, we were able to restore the connection and ensure the printer was accessible on the network.

Learning Experience: This activity enhanced my understanding of basic network troubleshooting, particularly in identifying whether issues stem from hardware (such as cables and ports) or network configuration. I learned the importance of following a systematic approach, starting from physical connections before moving to software-related checks. Additionally, I realized that practical experience is essential in strengthening theoretical knowledge, especially in networking tasks.

WEEKLY INTERNSHIP JOURNAL

March 16-20, 2026

Description of the Activity: We connected multiple computers to a single printer using its IP address, allowing shared access across different users within the department. In addition, we attended a basic Microsoft Excel seminar together with our supervisor and other department personnel, where fundamental Excel functions and features were discussed.

Problems Encountered: I initially found it challenging to confidently set up the printer on multiple computers, especially when some units could not detect it right away. I hesitated at times, unsure if the issue was due to incorrect IP configuration or something else on my end. During the seminar, I also realized that my familiarity with some Excel functions was limited, which made it difficult to keep up with certain parts of the discussion.

Actions Taken: To address these issues, we verified the accuracy of the printer's IP address and ensured that each computer was connected to the same network. We re-entered the correct IP where necessary and tested the connection by printing sample documents.

Learning Experience: This activity improved my understanding of network-based printer sharing and reinforced the importance of accuracy when configuring devices using IP addresses. It also enhanced my basic knowledge of Microsoft Excel, particularly in using essential functions and tools that can improve productivity. Furthermore, participating alongside our supervisor and department staff provided a more collaborative learning environment and allowed me to observe professional practices within the workplace.

WEEKLY INTERNSHIP JOURNAL

March 30-31, 2026

Description of the Activity: We performed basic PC repair and printer troubleshooting tasks. One of the main tasks involved diagnosing a computer that would not boot properly. After checking the components, we identified the GPU as the possible cause of the issue. We also handled printer-related problems such as connectivity and functionality.

Problems Encountered: I found it difficult at first to determine which hardware component was causing the system not to boot. Since multiple components could be responsible, I was unsure whether the issue was related to the GPU, RAM, or power supply. This uncertainty made the troubleshooting process slower for me.

Actions Taken: To resolve the issue, we followed a systematic troubleshooting process by checking each component one at a time. We reseated connections and tested the system with and without certain components. Eventually, we removed the GPU and confirmed that the system was able to boot successfully without it. For the printer issues, we checked connections, verified settings, and tested functionality to ensure proper operation.

Learning Experience: This activity taught me the importance of isolating hardware components when diagnosing PC issues. I learned that removing or testing parts individually can help identify the root cause more effectively. It also improved my confidence in handling hardware-related problems and reinforced the value of patience and logical troubleshooting in technical work.

WEEKLY INTERNSHIP JOURNAL

April 6-10, 2026

Description of the Activity: As a new month began, we once again conducted preventive maintenance on computers across different departments. This involved checking whether each unit was functioning properly, ensuring they were clean, free of unauthorized applications, and had sufficient storage. We also verified their connection to the network and documented their specifications. In addition, we performed an inventory of equipment from the central office, which included checking, listing, and verifying the condition and details of various devices.

Problems Encountered: I found it challenging to keep track of multiple equipment details during the inventory process, especially when handling numerous units with similar specifications. At times, I was unsure if I had recorded the correct information or missed certain details, which made me double-check my work more frequently.

Actions Taken: To address this, I became more organized by carefully documenting each piece of equipment and verifying the information before moving on to the next item. I also coordinated with my teammates to cross-check entries and ensure accuracy. During preventive maintenance, I followed a consistent checklist to make sure no step was overlooked.

Learning Experience: This activity helped me improve my attention to detail and organizational skills, especially when handling large amounts of data. I learned the importance of accurate documentation in maintaining reliable records. It also reinforced the value of teamwork and systematic processes in completing tasks efficiently and correctly.

WEEKLY INTERNSHIP JOURNAL

April 13-16, 2026

Description of the Activity: During this week, we cleaned and performed basic maintenance on a laminating machine to ensure it was functioning properly and free from dust or residue that could affect its performance. We also troubleshooted printer-related issues, such as connectivity and printing errors, to restore normal operation. In addition, we conducted an inventory of the servers prior to their configuration by checking and documenting their specifications, components, and physical condition.

Problems Encountered: I initially found it difficult to identify the exact cause of some printer issues because different problems showed similar symptoms. During the server inventory, I also had trouble familiarizing myself with some server components and terminology since it was my first time handling that type of equipment closely.

Actions Taken: To address these challenges, I carefully observed the troubleshooting process and asked questions whenever I encountered unfamiliar components or procedures. We checked printer connections, settings, and status indicators step by step to isolate the problem. For the server inventory, I reviewed the labels, specifications, and documentation thoroughly to ensure accurate recording of information.

Learning Experience: This activity improved my understanding of maintaining office equipment and strengthened my troubleshooting skills. I also gained additional knowledge about server hardware and the importance of proper documentation before configuration. Furthermore, the experience helped me become more attentive to detail and more confident when handling unfamiliar technical equipment.

WEEKLY INTERNSHIP JOURNAL

April 21-23, 2026

Description of the Activity: We performed server configuration by following the provided step-by-step setup procedures. The process included preparing the servers, applying the required configurations, and ensuring that each unit was properly set up before deployment. We were assigned a total of 13 servers that needed to be completed within the week.

Problems Encountered: Although the configuration process itself was fairly easy because of the detailed instructions provided, the task became time-consuming due to the number of servers that needed to be configured. We also encountered difficulty when assigning the servers to their respective boxes because each server had a specific serial number that corresponded to a designated box. During the last few units, we mistakenly placed some servers in the wrong boxes, which caused confusion and delayed the process.

Actions Taken: After discovering the mistake, we carefully rechecked the serial numbers of both the servers and their assigned boxes to correct the mismatches. We became more systematic by double-checking each serial number before sealing or moving the units. To manage the workload efficiently, we divided tasks among ourselves and monitored our progress to ensure that all 13 servers would be completed within the given timeframe.

Learning Experience: This activity taught me the importance of patience, accuracy, and organization when handling large-scale technical tasks. I learned that even simple procedures can become challenging when repeated multiple times under time pressure. The experience also reinforced the importance of verifying details, such as serial numbers, to avoid mistakes that could affect inventory and deployment processes.

WEEKLY INTERNSHIP JOURNAL

April 27-30, 2026

Description of the Activity: During the first two days of the week, we performed printer troubleshooting for units that could not be detected on the network or were not responding to ping requests. To resolve the issue, we configured the printers with static IP addresses to establish stable network connectivity. For the next two days, we assisted during a seminar by supporting the speakers with their technical needs, managing audio and video presentations, and operating the audio mixer to ensure the program ran smoothly.

Problems Encountered: While troubleshooting the printers, I initially had difficulty understanding the network configuration process, particularly when assigning static IP addresses and ensuring that there would be no conflicts on the network. During the seminar, I also felt pressured at times because technical issues had to be resolved quickly to avoid interrupting the program.

Actions Taken: To address the printer issues, we checked the network settings, verified the printers' current IP addresses, and configured static IPs to maintain stable connections. We also tested connectivity after the changes were applied to ensure the printers could be detected properly. During the seminar, I stayed attentive to the speakers' needs, monitored the audio and video equipment closely, and coordinated with the team to resolve any technical concerns immediately.

Learning Experience: This activity improved my understanding of basic network configuration, especially the importance of static IP addresses in maintaining stable printer connectivity. It also enhanced my ability to work under pressure and respond quickly to technical issues during live events. Furthermore, I developed better communication, coordination, and technical support skills through assisting both the seminar speakers and the technical team.

WEEKLY INTERNSHIP JOURNAL

May 12-14, 2026

Description of the Activity: During our final week at Department of Public Works and Highways Region III, we once again conducted preventive maintenance on computers in different departments to ensure that the units were functioning properly and connected to the network. We also monitored the responses submitted through Google Forms surveys, checking and organizing the collected data as needed. In addition, we provided assistance during a seminar meeting by managing the audio, video, and presentation setup to help ensure that the event proceeded smoothly., managing audio and video presentations, and operating the audio mixer to ensure the program ran smoothly.

Problems Encountered: Since it was our last week, multiple tasks had to be handled within a limited amount of time, which made it challenging to balance responsibilities efficiently. During the seminar assistance, there were moments when I became anxious about making mistakes while handling the audio and presentation controls, especially while people were already waiting for the program to continue.

Actions Taken: To manage the workload, I prioritized tasks based on urgency and coordinated closely with my teammates to divide responsibilities effectively. During preventive maintenance, I followed the established procedures carefully to complete the tasks efficiently. For the seminar assistance, I stayed attentive to the flow of the program, monitored the equipment continuously, and prepared backup presentation files and audio checks beforehand to minimize technical issues.

Learning Experience: This final week helped me realize how much I had improved in terms of technical skills, adaptability, and confidence throughout my internship. I became more comfortable handling technical tasks, troubleshooting issues, and assisting during events under pressure. The experience also taught me the importance of teamwork, communication, and professionalism in a real work environment, making my internship at DPWH Region III both meaningful and valuable.
